Kontron KISS Industrial Servers

Kontron offers a large array of Industrial PC rackmount platforms around two core architectures: passive backplane (SBC) and motherboard. The benefits of the passive backplane include its ability to support a greater number and combination of ISA/PCI/PCI Express expansion slots (up to 14) and its ability to offer longer life cycles, which can be greater than 5 years.

Kontron has a full range of configurable Kontron Industrial Silent Server (KISS) products available for use as a tower, desktop, or rackmount system. Each KISS system has an extremely low noise level of <35dB, making these servers ideal candidates for noise-sensitive environments. Redundant PSUs, RAID subsystems, expansion slots, and remote diagnostic software options enhance functionality.

FEATURES

- › Configurable long-life 1U, 2U, and 4U systems, with “short” option to fit in the space allocated
- › Flexible CPU, memory, drive, and Ethernet selections allow you to configure your system to match your precise needs
- › Motherboard or SBC passive backplane options for ease of field-level maintenance
- › KISS SBC systems make quick swap easy; hot swap SATA hard drives and chassis fans are also available
- › Low noise embedded industrial servers with <35dB
- › Assembled in North America for fast delivery; Kontron’s San Diego area manufacturing facility stocks KISS components so that your system can be assembled quickly and efficiently
